Internet Based Security Systems for Home and Business

It is a Remote Control Video Security System - A small robotic tripod on which you mount a webcam or digital camcorder.

One of the
cams

Includes Artificial Intelligence software to control camera movement from your computer.

Together they perform the function of a robotic camera-man for your webcam or digital camcorder.

With the system installed, your camera comes robotically alive, panning, tilting, and zooming under your computer's control.

- **Business after hours security system**
- **Cabin security**
- **Computer/Server room monitoring**
- **Daycare**
- **Farm animal monitoring**
- **Home security**

- **Make your live video Public or Private**
- **Model Home live cam and for security**
- **Retail store/Gas station monitoring**
- **Retirement Home elderly monitoring**
- **Street cams**
- **Traffic monitoring**
- **Warehouse employee monitoring**
- **Warehouse security**
- **Watch your pet at home while at work**
- **Zoo cams**

What Can the Video Security System Do?

Remote Control – Color Video over the web. Make it pan, tilt, and zoom to see what you want with simple mouse-clicks or voice commands.

Works with webcams and camcorders.

Digital and Optical Zoom – 26x optical zoom. Additional 10x of crisp digital zoom handled in hardware to give up to 260x zoom.

Automatic Focus

Surveillance – Set your Remote Control System to scan a room or area in a simple or complex pattern exactly as you specify. Useful for monitoring banks, lobbies, workshop, parking lot, daycare, workrooms.

Motion Tracking – The Remote Control System is tuned to track all human skin tones and can automatically pan and tilt to track the nearest person as they move around. Quality of tracking depends on quality of webcam.

Video Recording – Set your Remote Control System to record video from its input to your computer. Make your own home movies!

Automatic Notification by pager, email or alarm – When you are away and are not expecting any movement, set it to automatically notify you whenever there is any motion detected.

The system can send you an email including an image of the intruder, notify you by pager, and even set an audible alarm.

Up to 300 feet between the camera and computer (USB extenders)

Use your digital camcorders with our Security system.

Watch the live video from your cell phone!

Live Remote Monitoring – With our surveillance, motion detection, tracking, and remote control features, the Remote Control System can monitor an entire room by detecting, tracking and recording movement.

Viewable From anywhere in the world, use your web browser to view a history/recording of the movement captured by your Remote Control System!

Wireless system available - No more wires

BRAND NEW: Turn a light/lamp on and off via the internet. No longer do you need to leave a light on to monitor a room, you can turn a lamp on and off with just a mouse click just when you need it.

Plastic Domes too.
(charcoal, white and clear)

PC can be up to 300 feet away from the camera.
